

HOWARD & MOORE EDITION 3 (2003) : CORRIGENDA 5 (31.01.2006)

Notes (extended for Corrigenda 3.1 and revised for 4 and again for 5):

- 1) Corrigenda entries that are new since version 3.1 have a **4** in the left-hand column, all other entries have their original corrigendum number shown, but where the entries have been corrected in **this** version the corrections are in red and in column 1 there is an **R** beside the original Corrigenda number. **All new entries for Corrigenda 5 are completely in bold type.**
- 2) The Corrigenda includes virtually no Addenda (they will be held for the next Edition); readers are reminded that the listing process, even if there was but one editor with a deciding vote, involves several people. These people have other work, and cannot be expected to help issue quarterly H&M updates for readers dealing with recent descriptions of new taxa or recent taxonomic revision. All such information is being collated for 'collegiate review'. If the next edition of Howard & Moore remains on course for 2008 then this review will begin in mid 2006 and extend till our cut-off date. Readers wishing to facilitate this process should please send reprints or PDFs to Norbert Bahr xenoglaux@gmx.de All such contributions will lead to mention of senders names in our list of acknowledgements.
- 3) Further corrections are due to work on dates (see p. 831) and this process will continue (in principle changing all relevant entries from the same original book or paper in the same Corrigenda);
- 4) This draft includes some of the changes agreed to employ American spellings [**AS**] for New World bird names, a few change the other way – to English spelling [**ES**]. Further changes are under consideration but virtually all will be based on a review of the 'rules' we established for use of English names.
- 5) Virtually no corrections to the range statements are included (held for the next Edition);
- 6) Changes shown below which correct entries in Peters Check-list are *usually* provided with a source in []; such sources will accompany new footnotes in H&M 4; where, in this Corrigenda, no source is stated we expect to research and provide the source.
- 7) Changes for which no source is cited usually respond to errors in H&M 3 (some still 'carried forward' from H&M 1 or 2).
- 8) A word about brackets or parentheses in the context of authors' names and dates; in this list the message will always indicate if a bracket is to be added or if a bracket is to be deleted. Do not attach any importance to whether in the detailed Corrigenda entry such a bracket appears or does not appear. Unless addition or deletion is specified maintain the usage in the book.

A few words on the correction process. A) *Dates of publication*: Although perhaps some 300 date-corrections have been included since Corrigenda 1.2 bibliographic research is still on-going. Please do not imagine that the intent is to check the date of every taxon listed! There are just two threads to this process. First, when we know of published evidence that dates used in Peters Check-list were incorrect, and very often this is revealed by inconsistency between its volumes, then we try to ensure consistency based on the published evidence. In a few such cases we have had to dig for that evidence and we will be publishing such evidence so that it can be cited (this explains many cases where a change shown below is marked, for example, "[ECD in prep.]"). Second, we are working closely with Alan Peterson of zoonomen to agree on dates used and in that context we are all learning more and making changes that would not have been revealed otherwise. In summary all such work is triggered by knowledge of a problem, we are not going looking for more! B) *Names of authors*: We continue to add initials where these are needed to clarify the author in question. Occasionally we are finding cases where there have been errors in past statements of authorship. In H&M 4 we shall reconsider the abbreviation of some authors' names. C) *Parentheses*: Changes to the bracketing of authors' names based on Art. 51.3.1 of the ICZN Code (1999), begun here, also demand further work. Names introduced with variant spellings should not be shown with the author and date in parentheses; but it is necessary to check whether these variant spellings were themselves actually proposed as generic names. D) *Emendations*: Many cases of 'emendations' in specific names are being gathered for consideration: are they in fact mandatory corrections, justified emendations or unjustified emendations? **Entries herein suggesting that earlier H&M spellings were incorrect and are now judged 'not in prevailing usage' are provisional.** Many people have provided input for these corrections and our grateful thanks go to them all – they will be acknowledged by name in the next Edition of the book. As for Corrigenda 4 the draft of this was read by the same three careful helpers -- Normand David, Colin Jones and Daniel Philippe. Their assistance is greatly appreciated.

2.1.	828	Item 9. The original spelling <i>mulsant</i> should be emboldened, not the emended spelling. Zimmer (1953) (2719) selected the spelling <i>mulsant</i> and was followed by Wolters and by Schuchmann (1999) (2203). Because Zimmer's selection should have led to prevailing usage from about 1953, we erred in recommending against this.
2.1.	828	Item 10. We did not use the spelling <i>poecilonota</i> on p. 393 and it has not been used in HBW 8. Recommendation withdrawn!
